

The 4K ROM modification.

We now need A11 on the ROM instead of the RA2 jumper J4.

Mod-1:

Remove jumper J4 and R12.

Connect U8-23 to U9-25.

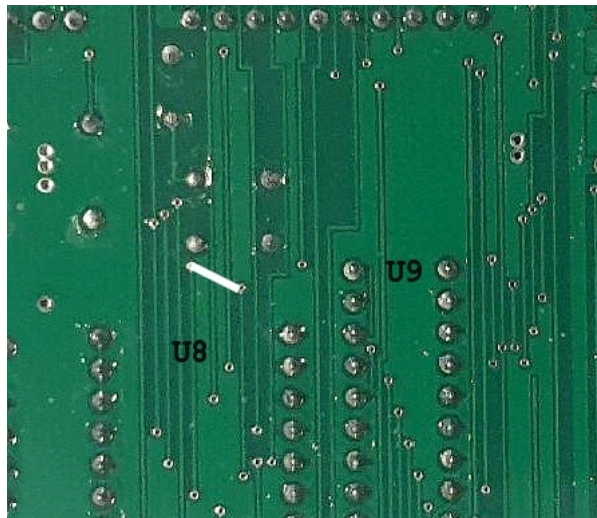

Mod-2:

To avoid mistakes with jumper J4 use this modification.

On component side, cut the track to R_A11.

Place a wire between the two A11 vias on the solder side.

Flash G1 (U13) with CMI-X_1.JED
use CMI-4X_1.JED for the (12) 16 MHz card version.

Flash U8 with cmiIOrom.bin and you can still BOOT and run FLEX.
